Licensing approach

INNOPY supports organisations in both acquiring and retaining the licence to efficiently manage complexities

licensing context

- Licence applications are complex and the **organisational impact** is often underestimated by applicants
- **Acquiring** a licence focuses on evidencing a **compliant set-up**, whereas **retaining** a licence is focused on **operationalising** the requirements in the organisation
- **Financial licensing requirements** (e.g. PSD2, e-money) cover various areas such as business operations, risk management, compliance, governance (incl. management assessment), and financial/risk reporting
- The **complexity** (e.g. level of detail of documents & risk assessments) and **length** of licence applications is **dependant on the size and risk profile** of the (envisaged) financial services and the process can in our experience take between 6-9 months and longer if issues occur

INNOPY services

INNOPY supports organisations in all licensing phases:

- Pre-licence application**
 1. **Quick scan**, adaptable to client needs (e.g. strategy validation, regulatory assessment, operational readiness)
Purpose: assess impact and take fact-based decisions
- During licence application**
 2. **Licence application**, using a structured approach (e.g. Crosslinx methodology*) to design processes which are compliant by design
Purpose: obtain the licence efficiently & compliantly
- Post-licence application**
 3. **Implementation support**, for successful strategy execution to retain the licence
Purpose: implement licence requirements in organisation

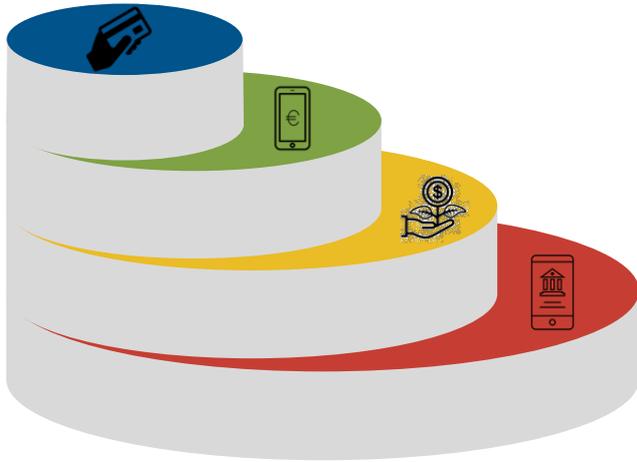

* For information on the Crosslinx methodology, see slides 14 and 15

Financial licences enable significant opportunities, from payments to e-money to investments, before considering a banking licence

Growth potential in financial licensing*

- **Payment institution licence**
 Authorisation to provide selected licensed payment services and upgrade licence to pursue other PSD2 services (e.g. PISP / AISP)
- **E-money licence**
 Authorisation to offer e-money services (e.g. universal gift cards, e-wallets, loyalty programs) to enhance customer offerings
- **Investment firm licence**
 Authorisation to set up an investment arm to utilise and monetise deposits via investments which can increase customer relevance
- **Banking licence**
 Authorisation to engage in banking activities such as savings products, mortgage lending, consumer lending, merchant credit lending or pre-financing, cash management

* Note: this is an indicative growth path, more types of licences and growth paths exist

Licensing approach

INNOPAY recognises that obtaining a licence consists of the preparation, application and retention of a licence

INNOPAY's vision on licensing is on **both** the acquiring and retaining of a licence

The **acquisition** of a licence consists of the preparation of an organisation to be capable to retain the licence without problems. This involves setting up compliant operations, transparent governance, and a sound and controlled business environment (focus on design).

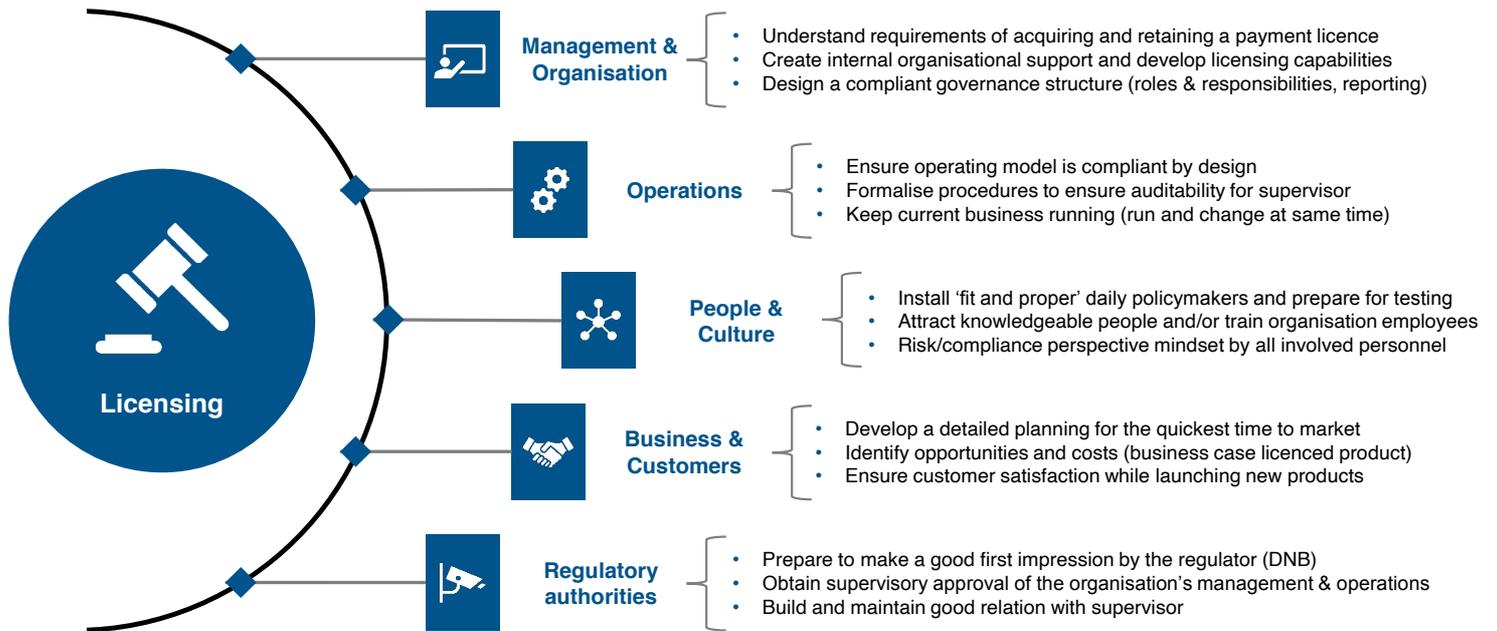

The **retention** of a licence lies in the operationalisation of the various licence requirements to maintain compliant operations and good relations with the supervisor (focus on operating effectiveness). Organisations tend to place less emphasis on this part.

Licensing approach

Applying for a PSD2 licence at the Dutch Central Bank consists of 10 generic steps which can take around 6-12 months

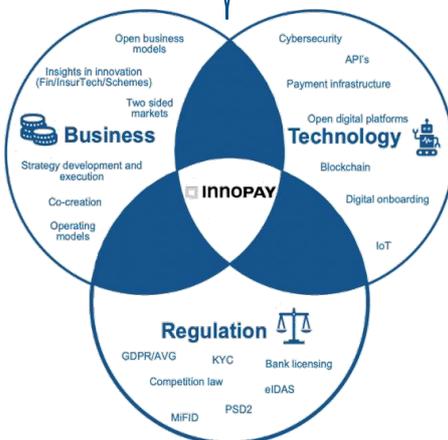

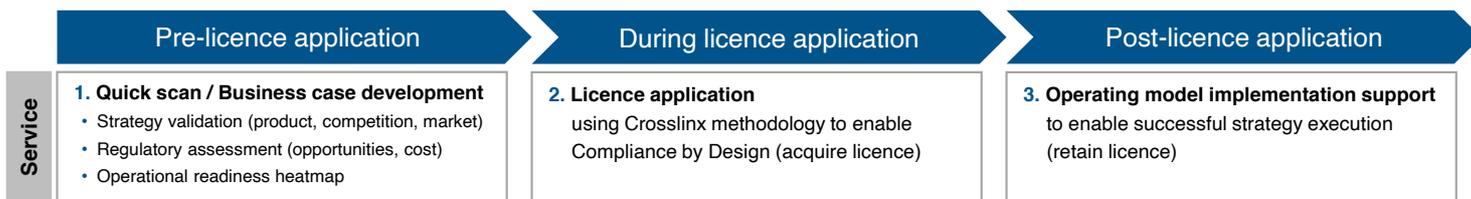

* The supervisory review period often takes longer than the statutory period (in our experience easily over 6 months), as the review period starts only after the supervisor declares the application package as complete and is paused when additional information is requested

Appendix: Introduction INNOPAY

INNOPAY is a thought leader on adjacent topics to payments such as digital identity, data sharing, and compliance

Everything's Transaction

We help our customers by showing them how to navigate in this new world of digital transformation and move towards a data sharing economy. As new kinds of value beyond currency - such as personal data, (access) rights, obligations, attention and reputation - form the basis of new business models, we see that every interaction is becoming a transaction. Our book with this vision has been selected as Management Book of the year in The Netherlands
